

Industrial users: Energy efficiency surveys and heat recovery reviews now available!

We provide great advice on industrial heat exchanger/ boiler systems in terms of efficiency, improvements and optimisations. We have specialist resource availability.

What can we do?

For any boiler house/heat exchanger system, we can now offer:

- Energy efficiency reviews / surveys
- System upgrade / improvement consultancy work
- Engineering optimisation
- Technical risk assessments / audits / H&S audits
- Training on systems (certified)

For all our sectors/customers

Including the following:

- Industrial
- Power
- Waste to Energy
- Chemical/Pharma
- Manufacturing
- Food and drink

With our wealth of experience. It works like this...

Our technical teams and engineers work together to get out to customer sites, assess existing system and plant and report back with advice and good old technical help on how they can improve their system as a whole or in part and great ideas

Examples/References of work done to date

- Energy savings (paper manufacturer and recycler) – saved 10-15% in energy costs
- Economiser modifications (Energy) for alternative fuel – 20% + fuel cost savings
- Plate heat exchanger layout (Food and Drink) saving significant space and overall maintenance costs
- Shell and tube heat exchanger design – improving waste heat usage and lowering input costs
- Full system waste heat boiler layout plans reviewed, re-engineered/redesigned, manufactured and installed
